REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

1. The closest prior art of record, Toshiyuki et al (JP 62-263194 English Translation) teaches the monoglycosylation of a phenol using pentaacetylglucose. The formation of only a monoglycosylated product is taught. The starting material is a diphenol and not an alkyl gallate as instantly recited. There is no teaching of the formation of a diglycosylated product as required in instant formula (3) (in instant formula 3 any two of the substituents R2, R3, R4 has a glucose pentaacetate moiety) or suggestion for making the same.

2. Prior art of record, Yujiro et al (JP 2000-319116 English Translation; paragraph 0018) teaches the formation of a mixture of Gallic acid methyl ester-3-glucoside and the 4-glucoside. It teaches the preparation of the two individual monoglucosides but not the formation of the diglycosides as recited in instant formula 3.

3. Applicants Declaration also shows via side-by-side comparison the formation of the desired product (diglycoside) in high yields when acetic acid and solvent are distilled off from the system at the rate instantly claimed. The monoglycoside is obtained if acetic acid is not removed from the system.

The prior art of record is not seen to teach or render obvious the method for preparing the glycoside of instant formula (3).

Any comments considered necessary by the applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
